Education

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech., CSE	Kalinga Institute of Industrial Technology, Bhubaneswar	8.64	2022-2026
Senior Secondary	MVN Aravali Hills, Faridabad	78.8%	2022
Secondary	Aravali International School, Faridabad	96%	2020

Experience

Summer Trainee

GAIL (India) Limited

Noida, Uttar Pradesh

May – July 2024

- Conducted in-depth analysis of SAP ABAP applications within GAIL's enterprise systems, identifying key functional and technical components.
- Researched and documented the organization's strategic migration plan from SAP ABAP to SAP S/4HANA, focusing on system architecture, data migration, and process optimization.
- Authored a comprehensive 35+ page technical report detailing migration feasibility, risk assessment, and implementation roadmap, contributing to future ERP transition planning.

Extracurriculars

Lead Coordinator of UI/UX Domain

E Labs

Bhubaneswar, Orissa

January 2024 – Present

- Designed and delivered 10+ high-quality social media creatives for Instagram using Figma and Adobe Photoshop, aligned with brand guidelines and engagement goals.
- Led end-to-end design and prototyping of the organization's official website in Figma, completing the project within a 2-week sprint.
- Served as UI/UX instructor for the 'DEZ-I-NIN 2.0' workshop, which attracted 400+ registrations; taught 130+ students over 3 weekends, covering core principles of user interface design, responsive web development, and design tools.

Professional Development

Amazon ML Summer School 2025 – Machine Learning Immersive Program (Selected Participant)

- Completed an intensive, industry-aligned ML curriculum designed by Amazon Scientists, covering 8 core modules.
- Gained hands-on exposure to scalable ML systems, model evaluation techniques, and real-world applications of AI in production environments.
- Strengthened foundational knowledge in algorithm design, statistical modeling, and data-driven decision-making expertled sessions.

Projects

Deep Learning Powered ResNet for Prostate Cancer Identification

Published in IEEE Xplore – 2025 International Conference on Intelligent and Cloud Computing (ICoICC)

- Designed and implemented a Convolutional Neural Network (CNN) using ResNet-50 architecture in Python with TensorFlow and Keras to improve prostate cancer detection from medical imaging data.
- Optimized machine learning model performance through advanced preprocessing, data augmentation, and hyperparameter tuning techniques.
- Achieved 83.88% classification accuracy, demonstrating strong command of deep learning, model evaluation metrics, and comparative analysis of CNN architectures

Technologies

C, HTML, CSS, JavaScript, React.js, Angular, Express.js, Node.js, Python, Java, Spring Boot, Docker, SQL, Flask, FastAPI, MongoDB, PostgreSQL, Next.js, Tableau, PowerBI, Tensorflow, Keras, Jenkins
