Education

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech., CSE	Kalinga Institute of Industrial Technology, Bhubaneswar	8.64	2022-2026
Senior Secondary	MVN Aravali Hills, Faridabad	78.8%	2022
Secondary	Aravali International School, Faridabad	96%	2020

Experience

Trainee Analyst Intern

Wissen Technology

Bangalore

January 2026 – Present

- Developed and maintained scalable backend services using Java (Core + Java 8) and Spring Boot, following MVC architecture principles.
- Worked with modern AI/LLM tools including LangChain, LangGraph, and Claude for experimentation and integration workflows.
- Designed and implemented RESTful APIs to support frontend applications built with Angular and React.

Professional Development

Amazon ML Summer School 2025 – Machine Learning Immersive Program (Selected Participant)

- Completed an intensive, industry-aligned ML curriculum designed by Amazon Scientists, covering 8 core modules.
- Gained hands-on exposure to scalable ML systems, model evaluation techniques, and real-world applications of AI in production environments.
- Strengthened foundational knowledge in algorithm design, statistical modeling, and data-driven decision-making expertled sessions.

Projects

AI Code Optimizer

FastAPI, DeepSeek, LangChain, FAISS, GitHub API, Streamlit

- Built a FastAPI-based backend service integrating the GitHub API to fetch and analyze source code repositories for performance evaluation.
- Implemented AI-driven code analysis using DeepSeek reasoning models to detect bottlenecks and generate automated refactoring suggestions for improving time and space complexity.
- Developed a semantic search and visualization pipeline using FAISS for vector similarity search and Streamlit for interactive UI, enabling efficient code exploration and insights.

Mock Stock Market Simulation

Spring Boot, Angular, PostgreSQL

- Developed a full-stack stock market simulation platform using Spring Boot (microservices architecture) and Angular, enabling real-time trading workflows for different user roles.
- Designed and implemented role-based access control (RBAC) with Admin and Customer roles, allowing product listing, trading operations, and secure user interactions.
- Engineered price fluctuation logic using scheduled cron jobs, enforcing $\pm 5\%$ per transaction cycle and 20% daily caps to simulate realistic market volatility and circuit breaker mechanisms.

Technologies

C, HTML, CSS, JavaScript, React.js, Angular, Express.js, Node.js, Python, Java, Spring Boot, Docker, SQL, Flask, FastAPI, MongoDB, PostgreSQL, Next.js, Tableau, PowerBI, Tensorflow, Keras, Jenkins
